Options Trading Excel Calculator - Algoji

To calculate our profit or loss we would first have to calculate the Average Cost of the shares we bought. To do this, we need to add our total amounts for both purchases and divide that value by the total number of shares we bought. The calculation for this would be $(24402+15000)/(11620+6000)$, which would give us a value of \$2.24.

company. EVA is used to measure the value a company generates from funds invested in it.

Costing Spreadsheet - Calculate Profit per Product or ...

The profit model is the linear, deterministic algebraic model used implicitly by most cost accountants. Starting with, profit equals sales minus costs, it provides a structure for modeling cost elements such as materials, losses, multi-products, learning, depreciation etc. It provides a mutable conceptual base for spreadsheet modelers. This enables them to run deterministic simulations or 'what if' modelling to see the impact of price, cost or quantity changes on profitability.
