Ultrasonic Testing Electromagnetic acoustic
transducer (EMAT) technology was studied at length
in the 1970s, and several patents were introduced for
many applications of this novel noncontact ultrasonic
testing (UT) technique that could generate ultrasound
without couplant.

Acoustic emission - Wikipedia

Acoustic emission source localization is a promising monitoring technique for concrete structures.

However, the accuracy of acoustic emission source localization is influenced by many factors, such as the presence of cracks, which are commonly observed in existing reinforced concrete structures.

Advances In Acoustic Emission Technology

The use of acoustic emission (AE) to monitor and control the grinding process is a relatively recent technology [6], besides being more sensitive to the grinding condition variations, when compared with the force and power measurements [7], standing as a promising technique to the process monitoring.

Applications where acoustic emission monitoring has successfully been used include detecting anomalies in fluidized beds, and end points in batch granulation. Standards for the use of acoustic emission for non-destructive testing of pressure vessels have been developed by the ASME, ISO and the European Community.
