### **Anatomy of the Urinary System | Johns Hopkins Medicine**

Anatomy of the Urinary System. The urinary system consists of two kidneys, two ureters, a urinary bladder, and a urethra. The kidneys alone perform the functions just described and manufacture urine in the process, while the other organs of the urinary system provide temporary storage reservoirs for urine or serve as transportation channels to carry it from one body region to another.

### **Free Anatomy Quiz - The Physiology of the Urinary System ...**

Quizzes on the urinary system. Each of the quizzes includes 15 multiple-choice style questions. If you get a question right the next one will appear automatically, but if you get it wrong we'll tell you the correct answer. An overall score is given at the end of each quiz. Choose from the following : Anatomy - Identify the parts of the urinary ...

### **Urinary System Anatomy and Physiology: Study Guide for Nurses**

Circular smooth muscle that involuntarily controls passage of urine from the urinary bladder to the urethra by acting like a valve  
The urethra extends from the bladder to the exterior of the body then passes through the urogenital diaphragm (an external voluntary sphincter made of skeletal muscle)

### **Anatomy and Physiology of the Urinary Tract**

The urinary system consists of the kidneys, ureters, urinary bladder, and urethra. The kidneys filter the blood to remove wastes and produce urine. The ureters, urinary bladder, and urethra together form the urinary tract, which acts as a plumbing system to drain urine from the kidneys, store it, and then release it during urination.
