Common Types of Natural Hazards Natural hazards can be classified into several broad categories: geological hazards, hydrological hazards, meteorological hazards, and biological hazards. Geological hazards are hazards driven by geological (i.e., Earth) processes, in particular, plate tectonics. This includes earthquakes and volcanic eruptions.

### **Natural Hazards | Maine Emergency Management Agency**

Natural hazards are natural events that threaten lives, property, and other assets. Often, natural hazards can be predicted. They tend to occur repeatedly in the same geographical locations because they are related to weather patterns or physical characteristics of an area. Natural hazards such as flood, fire, earthquake, tornado, and windstorms affect thousands of people every year. We

### **Natural Disasters | NASA**

Natural hazards fall into four main categories depending upon the driving forces of the event: geological hazards, atmospheric hazards, hydrological hazards, and biological hazards. Geological hazards occur because of geological processes such as movement in the tectonic plates and volcanic activity.

## **Natural Hazards | Home**

Natural Hazards is devoted to original research work on all aspects of natural hazards, including the forecasting of catastrophic events, risk management, and the nature of precursors of natural and technological hazards. Although hazards can originate in different sources and systems, such as atmospheric, hydrologic, oceanographic, volcanologic, seismic, neotectonic, the environmental impacts are equally catastrophic.

throughout all sectors of society, the USGS provides information, products, and knowledge to help build more resilient communities.

### **Natural Hazards - Geological Survey of Ireland**

The list goes on. Recent experiences with superstorms, wildfires, earthquakes and volcanic eruptions demonstrate just how destructive natural disasters can be. We are working to understand how climate change might worsen the impact of some of these natural disasters.

### **Natural Hazards Center**

Natural hazards are naturally occurring physical phenomena caused either by rapid or slow onset events which can be geophysical (earthquakes, landslides, tsunamis and volcanic activity), hydrological (avalanches and floods), climatological (extreme temperatures, drought and wildfires), meteorological (cyclones and storms/wave surges) or biological (disease epidemics and insect/animal plagues).

many direct effects of the Earth's most destructive natural hazards, we are indirectly affected by phenomena such as volcanic ash (e.g. the eruption of Eyjafjallajökull in Iceland in 2010). Other hazards, such as sinkholes, landslides and flooding are more frequent in Ireland.

### **What is a Natural Hazard? | GEOG 30N: Environment and ...**

Most existing hazard maps focus on a single disaster type. By creating a measure that aggregates the hazard from individual disasters, the increased hazard that results from exposure to multiple natural disasters can be better understood. The multiple hazard index represents the aggregate of hazard from eleven individual disasters.

### **Natural Hazards | Volumes and issues**

Hazards associated with volcanic eruptions include lava flows, falling ash and projectiles, mudflows, and toxic gases. Volcanic activity may also trigger other natural hazardous events including local tsunamis, deformation of the landscape, floods when lakes are breached or when streams and rivers are dammed, and tremor-provoked landslides.
