Jhaveri provide carefully updated information in a concise, bulleted format, keeping you current with new disease entities and syndromes, MR imaging techniques and applications, and pathology relevant to brain imaging.

Imaging of Brain Trauma.

Magnetic resonance imaging (MRI) of the brain is a diagnostic exam that uses a strong magnetic field, radio waves, and a computer to generate images of the inner structures of the brain. This test can be used to evaluate symptoms such as severe headache, memory loss, blurred vision, seizures, slurred speech, and loss of balance.

Diagnostic Imaging: Brain - 9780323756204

Abstract. Background: Preoperative radiological evaluation of the cranial or intracranial extension of malignant head and neck tumors is critical in the planning of curative surgery. Purpose: To assess the diagnostic accuracy of computed tomography (CT) combined with magnetic resonance imaging (MRI), compared to CT or MRI alone in diagnosing the direct cranial or intracranial extension of malignant head and neck tumors, using histopathologic results as the reference
