This is the blog associated with my book "Functional Programming in Java", published by Manning (<https://manning.com/books/functional-programming-in-java>). Functional Programming is not tied to any "functional" language. It is a way of thinking and a paradigm for writing programs. Some languages are more "functional friendly", and if you intend to write program using the functional paradigm, you should probably pick one of them... if you can.

Functional programs contain no assignment statements, so variables, once given a value, never change. More generally, functional programs contain no side-effects at all. A function call can have no effect other than to compute its result. This eliminates a major source of bugs, and also makes the order of execution irrelevant—since no side-effect can change an expression's value, it can be evaluated at any time.
