This code generates artificial randomly rough isotropic surfaces. These surfaces could be useful for simulating surface roughness or topographies from nanometre features of engineering surfaces to large-scale topography of mountains, terrains or landscapes. The code is based on simulating the surface topography/roughness by means of fractals.

For modelling and simulative purposes random rough surfaces with Gaussian statistics can be generated using a method outlined by Garcia and Stoll, where an uncorrelated distribution of surface points using a random number generator (i.e. white noise) is convolved with a Gaussian filter to achieve correlation.

## Continuous and repetitive gaussian random function in matlab

A rough surface  $f(x, y)$  can be seen as composed of many elementary waves of the form where  $\varphi$  is a phase angle. The phase angle also makes it possible to express sine functions due to the relationship. For a completely random surface, it should hold that the phase angle  $\varphi$  can take any value in, say, the interval 0 to  $\pi$  or  $-\pi/2$  to  $\pi/2$ .

The surface has a Gaussian height distribution and % exponential autocovariance functions (in both  $x$  and  $y$ ), where  $rL$  is the % length of the surface side,  $h$  is the RMS height and  $clx$  and  $cly$  are the % correlation lengths in  $x$  and  $y$ . Omitting  $cly$  makes the surface isotropic.

## How to Generate Random Surfaces in COMSOL Multiphysics ...

Random, two dimensional (2D) matrices with desired size and statistical parameters such as correlation length and root mean square height of the profile are generated in MATLAB®. In order to obtain desired surface parameters, we employ a Gaussian random 2D matrix generator and subsequent filtering with Gaussian 2D filter.
