Since their invention, power transformers have been essential for the transmission, distribution, and utilization of alternating current electrical energy, and they continue to have a vital role in current power systems. Achieving state of the art in transformers has been and continues to be a major objective of the IEEE PES Transformers Committee, whose efforts have been elemental in making transformers more efficient and reliable as power generation, transmission and distribution ...

Scope - PES Transformers Committee

Per IEEE C57.12.00, normal transformers are designed to handle 110% of rated voltage on the North American System. Interestingly, for wind power transformers, the overvoltage requirement is 115% of rated voltage. However, the frequency is allowed to be a minimum of 95% of rated frequency, resulting in a net volts/Hz allowance of 121% of rated.
