The branch of mathematics devoted to the study of mathematical methods for the organization, processing and utilization of statistical data for scientific and practical conclusions. Here, by statistical data is meant information on a number of objects in some, more or less extensive, collection, which have some specific properties.

Course description This course is aimed at rigorous development of the mathematical foundations of statistical inference. It covers random sampling, sampling distributions, point and interval estimation, and hypothesis testing, with emphasis on both normal and count data.

Statistics Definition

Mathematical statistics is the application of probability theory, a branch of mathematics, to statistics, as opposed to techniques for collecting statistical data. Specific mathematical techniques which are used for this include mathematical analysis , linear algebra , stochastic analysis , differential equations , and measure theory .

Mathematical Statistics - Seminar for Statistics

Statistics is about the mathematical modeling of observable phenomena, using stochastic models, and about analyzing data: estimating parameters of the model and testing hypotheses. In these notes, we study various estimation and testing procedures. We consider their theoretical properties and we investigate various notions of optimality.

Theory of Statistics

The study of math statistics includes the collection, analysis, presentation and interpretation of data. When data is collected, summarized and represented as graphs, we can look for trends and try to make predictions based on these facts. The study of statistics is an important foundation for data science, big data and artificial intelligence, among many other fields.

Mathematical Statistics (STAT) < University of Maryland

Very readable, precise and concise treatment of statistics. Requires mathematical maturity. Although it doesn't require a background in measure theory, some familiarity (or willingness to learn) would be really helpful (Ch. 1 provides an overview of measure-theoretic probability). I read the first half of it in a PhD level statistics class.
