methods such as North-West corner method (NWCM) or Least-Cost Method (LCM) or Vogel's Approximation Method (VAM), and then finally the optimality of the given transportation problem is checked by MODI. Transportation problem was first derived by F. L. Hitchcock in [1]. T. C. Koopmans presented the work of F. L. Hitchcock in the paper [2].

The MODI and VAM Methods of Solving Transportation Problems

The Modified distribution method is an improvement over the stepping stone method since; it can be applied more efficiently when a large number of sources and destinations are involved, which becomes quite difficult or tedious in case of stepping stone method.

We apply the steps in MODI method to the above table. First of all we calculate u_i & v_j & Δ_{ij} . using the relation $c_{ij} = u_i + v_j$ for occupied cells and $\Delta_{ij} = c_{ij} - (u_i + v_j)$ for unoccupied cells.

Here, NorthWest Corner Method will be used. And according to the NorthWest Corner Method this is the final initial basic feasible solution: Now, the total cost of transportation will be $(200 * 3) + (50 * 1) + (250 * 6) + (100 * 5) + (250 * 3) + (150 * 2) = 3700$. Step 3: U-V method to optimize the initial basic feasible solution.
