## **Why Buildings Fall Down | Thoughts on the World**

If a skyscraper is 200 m (650 ft) tall and a gale blows it hard at the top, there's a huge turning force trying to tip the whole building over to the side. That's why tall buildings need deep foundations (where a significant part of the building is constructed underground to support the part that's above ground). If something tries to push the top the building to one side, the foundations effectively resist and push it back in the opposite direction!

through the nervous system of its electric wires. A building reacts to changes in its outer or inner conditions through its brain of feed-back systems, is protected by the skin of its facade, supported by the skeleton of its columns, beams, and slabs, and rests on the feet of its foundations. Like most human bodies, most buildings have

Few human might be laughing in imitation of looking at you reading **why buildings fall down how structures fail matthys levy** in your spare time. Some may be admired of you.
